Years to Maturity (Years)	0.31	0.13
Effective Yield (%)	2.46	2.99

## FUND UPDATE

The portfolio outperformed its benchmark in November with our underlying managers delivering a positive result over the month.

Bank bill yields ended the month unchanged to slightly lower in yield. Performance benefitted from the higher running yield than the benchmark, due to the longer dated tenors of some NCD holdings and also from the additional margin offered by non-prime bank issuers. The credit spread duration of the portfolio remains short, as our underlying managers are conservatively positioned in terms of its credit spread duration and also in terms of its interest rate risk positioning. The portfolio remains highly liquid and is well positioned to take advantage of higher yields and wider credit spreads. Capital preservation and liquidity remain key concerns in the current environment.

Risk sentiment was buoyed over the month due to the weaker than expected inflation out of the United States and the Central Bank's commentary for the potentially slowing pace of monetary policy tightening.

In the United States, the Federal Reserve (the Fed) increased the Fed Funds Rate by a further 0.75% at their meeting in early November. In their statement the Fed indicated that the increments for policy tightening may be less than 0.75% while they stated that they will "take into account the cumulative tightening of monetary policy, the lags with which monetary policy affects economic activity and inflation, and economic and financial developments". Whilst the market rallied following the statement release, Fed Chair Powell's press conference included a comment that "the question of when to moderate the pace of increases is now much less important than the question of how high to raise rates and how long to keep monetary policy restrictive" and that "the ultimate level of interest rates will be higher than previously expected." Inflation data in the US came out weaker than expected. The headline rate rose by 0.4% in October (expectation was for 0.6%), taking the annual rate from 8.2% to 7.7%. Core inflation rose by 0.3% (expectation was for 0.5%) and resulted in the annual rate falling from 6.6% to 6.3%.

Domestically, the Reserve Bank of Australia (RBA) raised the cash rate by a further 0.25% to 2.85%, in line with market expectations. The RBA released their latest economic forecasts in their Statement on Monetary Policy. Headline inflation for 2022 is forecast to hit 8% before falling to 4.7% and 3.2% in 2023 and 2024. Trimmed mean is forecast to remain above the RBA's target band over the forecast period with trimmed mean seen at 3.8% and 3.2% in 2023 and 2024. Economic growth was revised down to 1.4% and 1.6% for the same period, with the sub-trend economic growth expected to result in the unemployment rate rising to 3.7% and 4.3%. In a speech late in the month Governor Lowe stated that the current high inflationary environment is seen as temporary, but that future inflation may prove to be more volatile and more challenging to keep in a narrow range. He sighted the reversal of globalisation, demographics, climate change and the energy transition as some of the factors that will lead to more variable inflation outcomes.

Bonds had a modest rally over the month. 3-year Australian bonds finished the month at 3.18%, from 3.27% at the start of month. 10-year bonds finished the month at 3.55% from 3.76% at the start. Three-month bank bills ended largely unchanged at 3.09% while six-month bank bill yields ended the month 10 bps lower at 3.56%. In the United States, 10-year and 2-year yields fell 44 bps and 17 bps to 3.61% and 4.31% respectively.

Credit spreads were mixed over the month with synthetic credit outperforming following positive market sentiment, however in physicals, some sectors performed whilst others underperformed. The Australian iTraxx index (series 38) traded in a large 42bp range finishing 41bps tighter 90bps. Australian physical credit spreads ended the month 1bp narrower on average. The best performing sectors were domestic banks and supra-nationals which tighten 9 & 5bps respectively, whilst the worst performing sectors were infrastructure, real estate and utilities that widened 14, 13 & 5bps respectively. Semi-government bonds performed narrowing 7bps to commonwealth government bonds.

- 1 The Management Costs included in this fact sheet are inclusive of the Management Fee and any Performance Fees and includes the effect of GST (net of RITC). They do not include other indirect costs. Refer to the Product Disclosure Statement and online disclosures for further information.
- 2 Past performance is not a reliable indicator of future performance. The Fund performance is net of management costs. Growth and Distribution returns may not equal the Total Net return due to rounding. Performance Since Inception is 1 February 2010.
- 3 Allocations may not equal 100% due to rounding.
- 4 Where a negative number is shown, this may indicate the use of derivatives and physical securities to create short positions in the portfolio.
- 5 The credit quality has been determined based on the Standard & Poor's credit rating tiers. Where a negative number is shown, this may indicate the use of derivatives and physical securities to create short positions in the portfolio. Allocations may not equal 100% due to rounding.
- 6 Calculated using weighted average. Where a negative number is shown, this may indicate the use of derivatives and physical securities to create short positions in the portfolio. Specifically, for the reporting of effective duration, negative numbers can also arise when security prices move in the same direction as interest rates where long positions are held in the portfolio.
