

TACTICAL INCOME FUND

As at September 2022

Fund objective

The Fund seeks to achieve a total return after fees that exceeds the total return of the Benchmark, by investing in a diversified portfolio of predominantly Australian income producing assets.

Investment approach

The Fund is actively managed and designed to make tactical investment decisions between cash, longer duration fixed interest securities and higher yielding securities, through every step of the investment cycle.

Benchmark

Bloomberg AusBond Bank Bill Index and Bloomberg AusBond Composite 0+ Yr Index (equally weighted)

Risk profile

Low-medium

Suggested timeframe

3 years

Inception date[^]

Fund performance

The Janus Henderson Tactical Income Fund (Fund) returned -0.54% (net) and -0.51% (gross). The Fund outperformed the Bloomberg AusBond Bank Bill Index and Bloomberg AusBond Composite 0+ Yr Index (equally weighted) (Benchmark) by 0.07% (net) in September, which fell by -0.61% on the month. However, the Fund continues its outperformance, beating the Benchmark across all periods including by 2.53% (net) over the year, and 1.01% (net) since inception per annum.

During September the primary driver of any underperformance was bond yields rising. It was a challenging environment for fund managers, with no cushioning to be had from credit sectors such as high yield, loans and EM debt. We are focused on capital preservation at this time, with portfolios defensively positioned as credit and higher rates all impact returns.

Rates strategies in the Fund are actively managed through exposure to the Janus Henderson Australian Fixed Interest Fund and interest rate derivatives. While the broad bond market experienced another large sell off in September, the Fund was cushioned by its heavily reduced duration position, thus significantly preserving capital albeit not immune to the market reaction. Whilst we still have a structural position in duration (at 1.7 years at month end) which we expect will be rewarded over the medium term, we were a lot more guarded compared to June, with duration now at about half of our peak level. The market's over exuberance for further rate rises and the hawkish central bank rhetoric gave us reason for caution. We will be happy to add duration back in at the right point.

Healthy yield levels and increases in cash rates are beginning to generate stronger total returns from yield income each month. Favoured allocations to high quality credit sectors, mostly AAA and AA type assets have cushioned the impact relative to other sectors which have underperformed to a larger magnitude. This is a deliberate position to navigate through the rising rate environment.

We have reduced our active positions in high beta sectors which assisted in protecting the portfolio over the month. We hold one of our lowest positions on record to Global high yield, have no Emerging Market debt and only a modest allocation to loans, which on a relative basis has preserved capital for the Fund.

It should be noted that policy tightening only began five-months ago, so we need to be patient and be positioned well for what comes next. With the yield on the Fund approaching 5%, future returns are expected to be solid.

Whilst the Fund now employs a healthy 'Yield-To-Maturity' and income is coming through, the volatility in bond markets is still impacting performance. We have seen these events through other market cycles and patience is required to navigate this environment.

Market review

Hawkish US Federal Reserve (Fed) forward guidance and an ill-timed UK fiscal package that triggered Bank of England support saw yields lift sharply over the latter part of the month. Risk appetite fell as more aggressive policy tightening was seen as lifting recession risks. Equity markets fell sharply, while credit markets weakened with spreads widening.

Against this backdrop, the Australian bond market, as measured by the Bloomberg AusBond Composite 0+ Yr Index, fell 1.36%. Higher bond yields were the main detractor from the bond market performance over the month, while investment grade credit was also softer, albeit outperforming higher beta credit sectors in other markets.

The Reserve Bank of Australia (RBA) lifted the cash rate by another widely expected 0.50% increment in early September to 2.35%. Short-term money market yields continued to climb as markets discounted further tightening. The three-month bank bill yield ended the month 61 basis points (bps) higher at 3.06%, while six-month bank bills ended 56bps higher at 3.57%. In terms of the tightening cycle, markets increased the pace and quantum of tightening with a 3.32% cash rate priced by year end and 4.10% in mid-2023.

TACTICAL INCOME FUND

(continued)

Domestically, Investment Grade issuers are mostly flush with liquidity and are facing into a difficult near-term environment from a position of balance-sheet strength.

After remaining relatively steady, yields surged higher following hawkish Fed signalling and dislocation in the UK bond market following the release of an expansionary mini budget. At the shorter end, the three-year government bond yield rose to as high as 3.72% before ending the month 32 basis points (bps) higher at 3.52%. Further out along the curve, 10- and 30-year government bond yields ended 29bps and 26bps higher at 3.89% and 4.08%.

Domestically, Investment Grade issuers are mostly flush with liquidity and are facing into a difficult near-term environment from a position of balance-sheet strength. Reflecting challenging market conditions, the Australian iTraxx Index (adjusted for rolls) closed 27 bps wider at 144bps, while the Australian fixed and floating credit indices returned -1.01% and +0.12% respectively.

Already showing signs of increasing fragility, risk markets were further rattled by a material escalation in the Russia/Ukraine conflict. On the corporate front, investors keenly await Northern Hemisphere third quarter earnings. Several high-profile companies pre-reported disappointing numbers and outlooks. Expectations are for rapidly tightening financial conditions to drive weaker top and bottom-line results, lowered guidance, and earnings downgrades.

In global credit, ratings agency downgrades (in North America), have outpaced upgrades by a ratio of almost 2 to 1. Cracks have also started to appear in the global leveraged finance / high yield market.

Market outlook and investment strategy

Central bank actions and forward guidance remain hawkish. After responding slowly to a larger than expected inflation shock, the pace of tightening has sped up with history reminding policy makers that the costs of fighting inflation are not diminished by drawn out tightening cycles. While the European Central Bank (ECB) has begun removing monetary accommodation, the US Federal Reserve is more advanced following its recent 0.75% lift in the US cash rate to 3.12%. Against the backdrop of peaking inflation, global tightening, European energy shortages and the ongoing Ukrainian War, the RBA must decide how hard to step on the monetary breaks. With September's tightening to 2.35% bringing the cash rate into the neutral range, the RBA has signalled that while further tightening moves lie ahead, some slowing in the pace of increases was likely as the level of the cash rate rose higher.

TACTICAL INCOME FUND

(continued)

The RBA moved by a less than expected 25bps at its October meeting.

Interest rates:

The RBA moved by a less than expected 25bps at its October meeting, switching to a more 'business as usual' incremental adjustment to the cash rate. At 2.6%, the cash rate is broadly neutral and the RBA has signalled that further moves still lay ahead. The RBA is projected to tighten by another 25bps in November with respite at the December meeting. We look for the final move in this tightening cycle in February, which would see the cash rate peak at a moderately restrictive 3.1%. This would make the current tightening cycle the fastest and equal largest since the adoption of the inflation targeting regime.

Sector allocation:

Investment grade credit: Commitment to tackle high inflation through tightening global liquidity will continue to generate volatility in credit markets. To navigate the environment ahead, investors should look for improved compensation for risk. We observe that the repricing across different pockets of credit and risk premia have not been simultaneous, providing outperformance opportunities through active rotation.

Higher yielding credit (ex-global): Attractive yields on high quality credit spreads have seen demand return from defensive income investors. In our view, the more illiquid, structured, and levered sectors of the market are yet to adequately reprice. We believe this is a process that will occur in due course as economic growth and earnings outlooks weaken.

Higher yielding credit (global): We anticipate that as conditions tighten further, global spreads will suffer decompression where high quality liquid credit outperforms lower quality as compensation for default risk and illiquidity needs to increase. We continue to favour being positioned up in quality and seniority in capital structures, leaving powder dry for when compensation for investors escalates. Global higher yielding sectors have underperformed better quality assets with Emerging Market Corporate debt and Globally High Yield both drawing down over 16% this calendar year. These are two sectors of the market we have avoided. We remain patient waiting for attractive entry levels to take on higher credit beta positions.

Environmental, Social and Governance (ESG)

From an ESG perspective, we continue to engage with intermediaries and issuers on growing Australia's positive impact bond market. New issuance on sustainable debt has slowed in recent months, albeit noting that 2021 was a particularly strong year for issuance of these securities. September offered little in the way of opportunities in new deals due to weaker market environment for primary issuance. Worley Parsons announced they are considering a new Australian Dollar Sustainability Linked Bond which targets a 65% reduction in their Scope 1 and Scope 2 GHG emissions by 2025 versus a 2020 baseline.

Important information

A Product Disclosure Statement and Additional Information Guide for the Fund dated 30 September 2022 is available at www.janushenderson.com/australia.

Past performance is not a reliable indicator of future performance. Performance source: Morningstar, Janus Henderson. Performance figures are calculated using the exit price net of fees and assume distributions are reinvested. The Gross performance methodology was updated at the end of March 2020 to reflect the Gross return to be Gross of Management costs and Sell Spread. Due to rounding the figures in the holdings, breakdowns may not add up to 100%.
