

TACTICAL INCOME FUND

As at December 2022

Fund objective

The Fund seeks to achieve a total return after fees that exceeds the total return of the Benchmark, by investing in a diversified portfolio of predominantly Australian income producing assets.

Investment approach

The Fund is actively managed and designed to make tactical investment decisions between cash, longer duration fixed interest securities and higher yielding securities, through every step of the investment cycle.

Benchmark

Bloomberg AusBond Bank Bill Index and Bloomberg AusBond Composite 0+ Yr Index (equally weighted)

Risk profile

Low-medium

Suggested timeframe

Fund performance

The Janus Henderson Tactical Income Fund (Fund) returned 0.62% (net) and 0.66% (gross). The Fund outperformed the 50% Bloomberg AusBond Bank Bill; 50% Bloomberg AusBond Composite 0+ Yr (Benchmark) by 1.53% (net) in December, which returned -0.91% on the month. The Fund continues its outperformance, beating the Benchmark over the longer term including by 2.7% (net) over the year, and 1.06% (net) since inception per annum.

The rise in yields was a detractor for long dated fixed rate bonds over the month. However, active Fund management including having neutral duration positions throughout most of the month aided performance on a relative basis. It was only when yields lifted significantly towards month end that Funds added a limited amount of duration.

When given the choice between buying duration through government bonds or positioning via the swap market, we have found the swap market to offer up more attractive pricing compared to bond yields. The Fund's exposure to swaps were a positive contributor in December outperforming on a relative basis.

Spreads leaked slightly wider in semi-government bonds detracting from performance, while swap spreads outperformed government bonds contributing positively.

A decent rally in credit spreads together with generous coupon income led to outperformance in investment grade credit. Fixed rate underperformed floating rate notes given the rise in yields on the risk free rate.

Our reduced cautious allocation to less liquid and higher beta credit saw only a modest positive contribution as global loans had a moderately good month. We have a very small allocation to global high yield which was flat on the month. We hold no emerging market debt due to ongoing volatility with concerns around genuine default risk due to global food and energy costs and pockets of global recession risk. We have also minimised our hybrid allocation, which on a relative basis appears extremely poor value given spread tightening over the year.

Overall December was a strong month for performance especially in light of the drawdowns in the bond market. The Fund was positioned with nearly no duration, which protected capital. Selective rotation in subsectors of credit enhanced returns, especially the Fund's weight towards high quality investment grade issuers in resilient outperforming industries. Overall 2022 was a tough environment for investors with a rare negative performance calendar year for defensive assets and growth assets. Australian Fixed Interest, measured by Bloomberg comp was down almost 10%, driven primarily by a lift in yields with a magnitude not seen in 4 decades and a risk off environment, impacting credit assets. While not completely immune from the impact of market moves, active management in Tactical both significantly outperformed and dampened drawdown over the year preserving most of the capital as well as providing investors with a smoother journey. Looking forward, the high yields now built into Funds suggests a much better likelihood of outperformance in 2023.

Market review

The decision by the Bank of Japan (BOJ) to lift its 10-year government bond yield curve control target from 0.25% to 0.5% roiled global bond markets. Australian government bond yields initially moved lower on signs that growth was slowing, before rapidly rising following the BOJ move. Flaring volatility saw risk appetite wane, with equity markets weaker and credit markets mixed.

The Reserve Bank of Australia (RBA) lifted the cash rate by a widely expected 0.25% increment in early December, taking the cash rate to 3.1%. While noting monetary policy was not on a pre-set path, the RBA signalled that further tightening was likely over the period ahead, with the interval and size of moves to be guided by incoming data and the RBA's assessment of the labour market and inflation outlook. Volatility returned to the short-term money market as markets reassessed the outlook for monetary policy. Three- and six-month bank bill yields lifted by 17.5bps and 20.5bps to end the month at 3.26% and 3.77%. In terms of the tightening cycle, markets are looking for the cash rate to peak close to 4.0% in late 2023.

Against this backdrop, the Australian bond market, as measured by the Bloomberg AusBond Composite 0+ Yr Index, fell 2.06%.

TACTICAL INCOME FUND

(continued)

We anticipate Q1 2023 new issuance will resume strongly, with Australian banks looking to navigate their term funding facility refinancing early in the year.

Australian yields initially fell as markets saw the prospect of a 0.50% move in the US cash rate as signalling that the tightening cycle was slowing. While the US Federal Reserve (Fed) lifted the Fed funds rate by the expected 0.50%, forward guidance remained hawkish and halted the fall in yields. Thereafter, yields lifted dramatically before Christmas when the BOJ unexpectedly adjusted its yield curve control settings.

At the shorter end of the yield curve, the three-year government bond yield fell to as low as 3.01%, before ending the month 34 basis points (bps) higher at 3.50%. Further out along the curve, 10- and 30-year government bond yields declined to 3.30% and 3.59%, before ending at 4.05% and 4.34%.

In credit markets, investors await further feedback as companies move into early 2023 reporting season. Cognisant of the impacts of tightening policy, slower growth will be unevenly distributed and disproportionately felt across sub-sector credit fundamentals. The grip of macro settings on corporate earnings outlooks and employment intentions will be closely scrutinised by central bankers and investors alike.

The Australian iTraxx Index closed largely unchanged at 91bps along with floating rate spreads, while fixed rate credit spreads rallied up to 8bps as swap yields tightened to government bonds. Australian fixed and floating credit indices returned -0.62% and 0.34% respectively, with benefits of credit excess returns offset by the rise in broader bond yields for the fixed rate market.

Primary markets moved into 'holiday mode', with Suncorp-Metway issuing a new five-year note early in December which was well received. The waning supply of new issuance allowed domestic spreads to firm and deliver some healthy excess returns from elevated spread levels via income advantage.

We anticipate Q1 2023 new issuance will resume strongly, with Australian banks looking to navigate their term funding facility refinancing early in the year. The strong level of income coming through from high quality credit securities provides investors some return buffer for likely concessions into primary supply.

TACTICAL INCOME FUND

(continued)

The move by the BOJ threw a curve ball at markets and resulted in higher yields at the longer end of the curve.

Market outlook and investment strategy

The move by the BOJ threw a curve ball at markets and resulted in higher yields at the longer end of the curve. The rally in yields across the yield curve in early December proved to be premature given the hawkish stance of central banks and no signs of a definitive softening in labour markets or gap down in inflation. However, the rally was a harbinger of what to expect once markets look through the final phase of the tightening cycle.

Our base case has the RBA tightening by 0.25% in February and then pausing before delivering a late tightening cycle 0.25% “inflation insurance” move in May. This would take the cash rate to a moderately restrictive 3.6%, making the current tightening cycle the largest and fastest in the monetary policy inflation targeting era.

While we do not see the conditions in place for monetary easing in 2023, the window opens for the RBA to take its foot off the monetary brakes over 2024 provided core inflation eases in response to a period of sub trend growth. After pricing in a cash rate peak closer to our profile in early December, market pricing has pivoted back to a 4% cash rate peak later in 2023 and 4.4% long-run cash rate (using the eight-year rate two-years forward as a proxy). In our view such a cash rate is more in line with a cyclical peak rather than the ‘new’ long-run normal cash rate. Accordingly, we see the recent lift in yields as beginning to restore value.

In navigating the environment ahead, investors should be on the lookout for improved compensation for risk as monetary policy tightens further. We observe that the repricing across different pockets of credit and risk premia have not been simultaneous, providing outperformance opportunities through active rotation.

In our view, the more illiquid, structured, and levered sectors of the market are yet to adequately reprice. We believe this is a process that will occur in due course as earnings outlooks weaken.

We anticipate that as conditions tighten further, global spreads will suffer decompression where high quality liquid credit outperforms lower quality as compensation for default risk and illiquidity needs to increase. We continue to favour being positioned up in quality and seniority in capital structures, leaving powder dry for when compensation for investors escalates. Both Emerging Market Corporate debt and Global High Yield have had double digit draw downs this calendar year. These are two sectors of the market we have avoided. We remain patient waiting for attractive entry levels to take on higher credit beta positions.

Environmental, Social and Governance (ESG)

From an ESG perspective, we continue to engage with intermediaries and issuers on growing Australia's positive impact bond market. While issuance levels were lower in 2022 than the year prior, this was in line with the broader bond market. We look to 2023 with optimism in terms of growth. Our ongoing ESG specific engagement meetings with companies remained a focus over the year, and will continue to do so in 2023.

Important information

A Product Disclosure Statement and Additional Information Guide for the Fund dated 30 September 2022 is available at www.janushenderson.com/australia.

Past performance is not a reliable indicator of future performance. Performance source: Morningstar, Janus Henderson. Performance figures are calculated using the exit price net of fees and assume distributions are reinvested. The Gross performance methodology was updated at the end of March 2020 to reflect the Gross return to be Gross of Management costs and Sell Spread. Due to rounding the figures in the holdings, breakdowns may not add up to 100%.
