

Realindex Emerging Markets Value-Class A

Monthly Factsheet

28 February 2023

Portfolio Description

The portfolio invests in global shares predominantly in emerging markets by selecting and weighting companies based on fundamental measures of company size.

Investment Strategy

Realindex forms a universe of emerging market companies based on accounting measures. Factors such as quality, near-term value and momentum are applied to form a final portfolio of companies. The resulting portfolio has a value tilt relative to the benchmark and provides the benefits of being lower in cost, lower turnover and highly diversified compared to traditional active investment strategies. This fund does not hedge currency exposure.

Investment Objective

To provide capital and income growth by investing in global shares predominantly in emerging markets and outperforming the MSCI Emerging Markets Index, over rolling five year periods before fees and taxes.

Product Overview

APIR code	FSF1101AU
Inception date	20 January 2011
Fund Size (A\$)	763 million
Benchmark	MSCI Emerging Markets Net Index
Number of stock holdings	424

Country Breakdown

*Benchmark weight

Realindex Emerging Markets Value returned -1.49% (net of fees) during February, outperforming the MSCI Emerging Markets Net Index which returned -2.28% (in AUD).

Emerging markets were mixed in February, with China (-6.4%) and Brazil (-5.1%) trading lower and Turkiye (+10.5%) and Eastern Europe trading higher. A warmer European winter along with their ability to diversify energy imports have meant a fully-fledged energy crisis has not materialized. This, along with China's reopening, has brought a degree of softening or cautious optimism in the global economy. Beijing has begun to support housing demand and restore consumer sentiment, after limiting leverage last year in the wake of the liquidity crisis. Turkiye's central bank has lowered rates to support the economy in the aftermath of the earthquake. In the MSCI Emerging Markets Index, majority of sectors fell for the month with Consumer Discretionary (-8.6%) and Utilities (-7.2%) struggling the most, while Consumer Staples (+0.7%) and Information Technology (+0.7%) posted the only positive returns.

Within this environment, Value stocks outperformed Growth stocks by 2.2% over the month (MSCI Emerging Markets Value -1.1% vs. Growth -3.4%, in AUD). Over the past year Value has outperformed Growth by 5.7% (AUD), while on a five year basis Growth has outperformed Value by 0.2% p.a. (AUD).

The fund outperformed the benchmark due to strong stock selection within China (+137bps) while the largest detractor was the overweight to Hong Kong. The biggest wins for the fund were the underweights to Chinese Consumer Discretionary and Information Technology names such as Meituan (+22bps) and Alibaba (+18bps). Overall, the largest detractors were stock selection in Financials such as the overweight to Ping An Insurance (Group) Company of China, Ltd.

Driven by the methodology of rebalancing further into cheap value companies, the portfolio continues to sit on deep valuation discounts. At the end of February 2023 the portfolio reflected a 81.0% dividend yield premium to the MSCI EM index, whilst trading at a 36.1% price to book discount, a 50.3% price to cashflow discount and 52.5% price to sales discount, indicating that the portfolio remains well positioned for mean reversion in Value.

Note: Returns in parenthesis show the total return for the month ending 28 February 2023. All returns are given in local currency terms unless otherwise stated.

Performance returns are calculated net of management fees and transaction costs. Performance returns for periods greater than one year are annualised. Past performance is not a reliable indicator of future performance.

Data source: First Sentier Investors 2023

Data as at: 28 February 2023

Portfolio Beta measures the portfolio's sensitivity to benchmark movements. Mathematically, it is the covariance of the portfolio vs the benchmark divided by the variance of the benchmark.

Turnover is the average of sales and purchases divided by the average portfolio size. **Cashflow Adjusted Turnover** is the same as above, except that the lesser of sales and purchases is used in place of the average of the two. This is to adjust for turnover that is related to investing inflows or selling stocks to meet outflows rather than related to active management of the portfolio.
