Walter Scott Global Equity Fund

Macquarie Professional Series

Monthly report – 30 June 2021

Performance summary

- The Fund returned 4.86% in June 2021, compared with a return for the Benchmark of 4.71%, with global equities eking out further gains against a backdrop of accelerating vaccination rollouts and a still-extravagant monetary and fiscal environment.
- The 'reflation trade', which has been a feature of equity markets since the tail end of last year, ran out of puff this month, with share prices across several cyclical sectors coming under pressure. Financials and Materials declined, while the IT sector rose strongly. For the Fund, the largest relative contributors to performance were holdings in Health Care, including Edwards Lifesciences and Intuitive Surgical, and the Fund's long-term underweight to Financials. These were partially offset by holdings in Consumer Discretionary, such as Inditex.
- Some companies in the portfolio have endured a tough pandemic-induced downturn but are now recovering well. Inditex's recent first-quarter fiscal year 2022 results showed good progress against the comparable pandemic-blighted period last year, although inevitably, the revenue and profit numbers fell shy of the equivalent pre-COVID period in 2019. However, business is rebounding, and gross margins were strong in the first quarter, at around 60%, and reflected robust full-price sales as the new (Northern) spring/summer collections were well received by customers. There has been a recovery in physical store sales, but it is noteworthy that the strength of online sales has continued nonetheless. Encouragingly, trading since the quarter end has been impressive, with sales actually up on 2019 levels, which bodes well for the remainder of the year.
- There were no initial purchases or final sales within the portfolio during the month.
- A brighter economic and earnings outlook may continue to provide a positive backdrop for equities. However, stock markets have travelled a long way since the trough of March last year, and investors have perhaps discounted a near-term recovery in corporate profits. The prospect of a tighter monetary environment may become a greater focus of investor attention should inflationary pressures persist, although a mild upward tick in interest rates might not be too disruptive to equity markets in a benign growth environment. Higher rates could, however, expose companies with weak business models that have gorged on debt, notwithstanding any cushion provided by economic growth. Walter Scott's focus remains on investing in financially strong, market-leading businesses whose management teams are adept at navigating the challenges and seizing the opportunities brought about by cyclical or macroeconomic shifts.
