Monthly Fact Sheet

Fund Performance

- In September, the Fund generated negative returns and underperformed its benchmark. Country/yield- curve positioning hurt returns. The position in the US detracted as rates increased more than other countries.
- Our long to European rates via Germany also detracted as rates rose on continued natural gas led inflationary pressures.
- Sector/security selection was negative. Our exposure to investment grade and high yield corporates detracted as risk off sentiment took hold. Our exposure to US Treasury inflation-protected securities (TIPS) also weighed on returns as breakevens narrowed, but this was somewhat offset with inflation accruals.
- Currency positioning hampered performance. However, portions of our currency strategy helped to offset some detraction, particularly longs in the Indian rupee and Japanese yen.

- In the UK, we reduced our position over the month. The Bank of England is expected to continue to aggressively raise rates to combat stubbornly high inflation despite a challenging growth outlook.
- In Australia, we broadly maintained our position, focusing on the short end of the curve. We are being very selective about adding EM debt given continued inflation and at this point in the hiking cycle.
- Within investment-grade corporate bonds, our allocation is mostly balanced between the US and Europe in BBB-rated bonds.
- Our exposure to high-yield corporate bonds was reduced in September. We remain focused at the Fund level on credits in the BB-rated part of the high-yield space, where there may be opportunities for credit-rating upgrades and from fallen angels to rising stars.
- Our currency decisions are tactical, driven by a proprietary quantitative model.
- In September, we ended the period underweight the US dollar and generally underweight the Euro and DM cyclical currencies including Australian and Canadian dollar.

Fund Strategy

- Our current investment approach is based on slowing growth, tighter financial conditions and elevated, but regionally diverging inflation trajectories.
- DM central banks have reacted with large interest hikes to combat persistent inflation while recognizing that the growth outlook has become more challenging.
- Over the month, we reduced our European exposure.

Fund Composition Disclosure

Numbers may not sum due to rounding.

The Fund seeks to control risks and enhance returns through currency management. The Fund intends to hedge to Australian dollars most of the foreign currency exposures of its debt and fixed income securities; however, up to 10% of the Fund's net asset value may be exposed to the risks and returns of international currencies. The Fund is currently 98.5% hedged to Australian dollars.

The Fund may invest up to 40% of its assets in lower-rated, higher-yielding noninvestment-grade debt and fixed-income securities as rated by a credit rating agency (CRA). Debt and fixed income securities that are rated below investment grade are commonly referred to as "junk bonds." They are considered to be more speculative in nature and subject to a greater risk of loss of principal and interest income than investment-grade securities. Investment-grade-rated assets, on the other hand, are those which, in the opinion of a CRA, are more likely to meet their financial commitments. Ratings assigned by a CRA are merely the opinion of that CRA about the likelihood of the issuers of the rated securities to meet their debt obligations when they fall due or the likelihood of loss in the event of a default of the issuer of the rated securities. Credit ratings used by the investment manager are intended for use by wholesale clients, and should not be relied upon by retail clients when making a decision about the product offered in the Fund's PDS. Ratings should not be taken to be an indication of investment merit or a recommendation to buy, sell or hold any particular investment. There are inherent limitations with credit ratings; future events and developments cannot be foreseen and credit ratings may change over time due to, among other things, a change in the financial condition of the issuer. The investment manager may use credit ratings of securities as an input into security selection alongside the investment manager's own screening, research and risk-management processes.

Performance Figures

In Australian dollars. Numbers may not sum due to rounding. The total, growth and distribution returns of the Fund are net of fees and costs and do not allow for tax or inflation. Performance is calculated in accordance with the Financial Services Council Standard No. 6, using the relevant end-of-month exit prices, and assumes that income is reinvested and that the investment is held for the full period. The performance figures are historical and past performance is not necessarily an indication of future performance. The information above may change.

AllianceBernstein Investment Management Australia Limited (ABN 58 007 212 606, AFSL 230 683) ("ABIMAL") is the responsible entity of the AllianceBernstein Dynamic Global Fixed Income Fund (ARSN 165 810 686) ("Fund" or "AB Dynamic Global Fixed Income Fund") and is the issuer of units in the Fund.
