

## Perpetual Investment Funds

# PERPETUAL DIVERSIFIED INCOME FUND

December 2022

### FUND FACTS

**Investment objective:** Aims to provide regular income and consistent returns above the Bloomberg AusBond Bank Bill Index (before fees and taxes) over rolling three-year periods by investing in a diverse range of income generating assets.

**Benchmark:** Bloomberg AusBond Bank Bill Index\*\*

**Inception date:** October 2005

**Size of fund:** \$1,466.2 million as at 31 December 2022

**APIR:** PER0260AU

**Mgmt Fee:** 0.59% pa\*

**Benchmark Yield:** 3.125% as at 31 December 2022

**Suggested minimum investment period:** Three years or longer

### FUND BENEFITS

Provides investors with the potential for regular income, above cash returns and lower volatility than other income strategies through an actively managed, highly diversified and liquid investment.

### FUND RISKS

All investments carry risk and different strategies may carry different levels of risk. The relevant product disclosure statement or offer document for a fund should be considered before deciding whether to acquire or hold units in that fund. Your financial adviser can assist you in determining whether a fund is suited to your financial needs.

## MARKET COMMENTARY

Credit markets were steady in December while global equities (with the notable exception of China) gave back some their fourth quarter gains, and bond yields rose on aggregate. December brought to a close an extremely challenging year for financial markets with almost all asset classes retreating and fixed rate bonds experiencing their worst performance in 40 years. The key contributing factor to this turmoil has been the aggressive tightening of monetary policy, headlined by the greatest calendar year increase of the Fed Funds rate in history. Global recession concerns and the timing of potential pivots from the Fed and other central banks are expected to dominate financial markets into 2023.

Yield rose sharply in December, outpacing offshore peers. The curve steepened slightly with long term yields pushing back above 4% by month end. The RBA elected to increase the target cash rate by 25bps during for the third consecutive month. The current rate of 3.1% represents the highest level in over a decade while still well behind the US. Minutes released during the month revealed that the possibility of no increase was discussed for the first time since the commencement of the tightening cycle. Swap rates rose less than bond yields and swap spreads tightened slightly over the month.

Domestic spreads traded in a tight range, narrowing slightly over the month. Steep expansion throughout 2022 leaves domestic spreads at their highest consistent level since 2013 (2020 COVID spike notwithstanding). Offshore peers also tightened with the exception of Japan which pushed wider as the BOJ considered loosening their rates targets. Issuance was subdued in line with seasonal expectations. Notable issuance included a \$1B benchmark deal from Suncorp Metway while Westpac saw strong demand for their 1-year senior unsecured issuance which raised \$1.7B. Securitisation volumes were steady including new RMBS deals from Resimac and Mystate Bank.

## PORTFOLIO COMMENTARY

Income return was the most significant contributor to relative return during the month. Financials and securitised sectors were the most substantial drivers of income return with non-financial corporate exposures also contributing. Ongoing increases in interest rates and expanding credit premia have contributed to the increase in portfolio income over the past year. The portfolio's running yield was 4.8% at month end, with the spread measured at 2.1%.

Credit spread dynamics contributed to outperformance during December. Credit spreads traded in a tight range, narrowing over the course of the month. Credit spread performance was led by domestic and offshore banks with corporates and utilities also contributing. The Portfolio's exposure to USD denominated domestic bank debt performed well, led by Macquarie and Westpac USD hybrids. The Fund's small, short position in the EUR Xover CDS index performed well during December as Euro corporate spreads surged in the middle of the month. The Manager exited the position at the peak in the wake of the surprise announcement on monetary policy by the Bank of Japan (BoJ), which loosened the yield on its ten year government bonds from 0.25% to 0.5%, wreaking havoc on equity, bond and currency markets.

In recognition of tightening financial conditions, reduced liquidity (as a result of quantitative tightening by central banks) and the challenging outlook for credit, the Fund maintains approximately 10-15% weighting across cash and highly liquid government and government adjacent sectors. After selectively adding during December, the Fund's semi-government exposure was 8.3% at month end. The contribution of duration exposure was constructive. The portfolio began the month with near 0 duration. The Manager elected to add duration exposure as long term yields rose following the surprise BoJ policy change. As yields retraced lower by month end, portfolio performance benefited from the modest positive duration exposure (less than six months).

Sector allocation was actively managed during the month. Allocation to domestic bank and semi government sectors was increased. RMBS exposures were rotated with the manager electing to take part in the December Resimac deal and trimming a number of existing RMBS positions. Elsewhere, the Fund took part in the new benchmark deal from Suncorp Metway. As the outlook for credit spreads improves, the Fund retains capacity to take advantage of relative value opportunities.

## OUTLOOK

The credit outlook remains neutral.

Valuation indicators are marginally negative. Following a moderation in swap spreads, the majority of valuation indicators are in range of neutral levels. The USD AUD basis swap remains elevated relative to long term averages, detracting from the credit outlook.

Growth indicators continue to detract from the overall credit outlook. Recession risks remain prominent and financial conditions are notably tighter. The ratio of upgrades to downgrades has reached an inflection point and is no longer providing support for the growth outlook. Tightened financial conditions as described in the Fed's Senior Loan Officer survey continue to be a significant headwind.

Supply and demand have improved and are now neutral. Supply is expected to be subdued in line with seasonal patterns while an elevated volume of maturities in the new year is expected to be supportive.

Technical indicators remain supported by a noticeable recent uplift in cash across real money accounts and improving trends in US credit and equity markets.

While the outlook for credit spreads has improved considerably, the team remains cognisant of the risks associated with tightening financial conditions and slowing economic growth.
