Fund commentary

- Covid-19 re-emerges as focal point for markets despite rising vaccination rates
- Australian dollar impacts relative performance

The portfolio was negatively impacted by the emergence of the Omicron Covid-19 variant which the World Health Organisation announced as a 'variant of concern' in late November. Portfolio positions that were leveraged to the reopening of global borders and a corresponding acceleration in economic activity were most impacted. Commodities were also weaker, most notably oil, which impacted our commodity holdings.

The Australian dollar continued its downward trend in November finishing near to its twelve-month low relative to the US dollar. The US dollar has been the overriding factor

in currency markets, appreciating against most crosses. Our Australian dollar exposure does not cost us per se; however we do not capture the full benefit of stronger foreign currencies on our overseas holdings and a relative comparison to the broader index is negatively impacted.

The portfolio continues to run with a material cash balance of 12% and this elevated cash position puts us in a strong position to take advantage of any short-term disruption in markets to either add to existing positions or initiate positions where we have been patiently waiting for an entry point.

Important Notice

This Report is issued by PM Capital Limited ABN 69 083 644 731 AFSL 230222 as responsible entity for the PM Capital Asian Companies Fund (ARSN 130 588 439, the 'Fund'). It contains summary information only to provide an insight into how we make our investment decisions. This information does not constitute advice or recommendations, and is subject to change without notice. It does not take into account the objectives, financial situation or needs of any investor which should be considered before investing. Investors should consider the Target Market Determinations, a copy of the current Product Disclosure Statement which available from us, and seek their own financial advice prior to investing. The PDS explains how the Fund's Net Asset Value is calculated. Past performance is not a reliable guide to future performance and the capital and income of any investment may go down as well as up due to various market forces. The investment objective is not a forecast, and is only an indication of what the investment strategy aims to achieve over the medium to long term.

1. Returns are calculated from exit price to exit price assuming the reinvestment of distributions for the period as stated and represent the combined income and capital return. The Index is the MSCI All Country Asia ex Japan Net Total Return Index in Australian dollars, net dividends reinvested. See www.msci.com for further information on the Index.
