Notes:

Security selection will change. You should not rely on this statement in making an investment decision about any security, but should make your own independent inquiries.

All Fund analysis tables reflect the effective exposure by the Fund investing in to the underlying fund - the Invesco Zodiac Fund.

The table for Top 10 Industries uses the Standard & Poor's industries.

The table for quality distribution uses Moody's ratings.

The table for maturity allocation uses maturities based on the value of loan/note holdings.

Portfolio statistics definitions:

'Current yield' – the annual income (interest or dividends) divided by the current price of the security and represents the return an investor would expect if he or she purchased the bond and held it for a year.

'Yield to maturity' – the rate of return anticipated on a bond if held until the end of its lifetime; takes into account the bond's current market price, par value, coupon interest rate and time to maturity.

'Effective duration' – takes into account that expected cash flows will fluctuate as interest rates change.

**Market review**

Loans returned -0.03% in March, bringing year-to-date total returns to 3.23%. Suddenly emergent stress in the banking sector during the month sent shockwaves through risk markets and upended investors' economic outlooks. Swift government action to stem the crisis of confidence in smaller banks contained the fallout from bank failures, but the looming threat of diminished lending activity kept a lid on risk appetite. In response, investors recalibrated their interest rate expectations downwards. Capital market activity stalled amid the turbulence but the loan market continued to function in an orderly fashion. Except for a choppy three day period in which loans shed -1.10% (March 13-15), loans demonstrated muted price action amidst broader risk market volatility and retraced much of the mid month drawdown by month end. Ultimately, prices declined -0.77% in March, largely offset by 0.74% of coupon income.

During March, loans underperformed high yield and investment grade which returned 1.08% and 2.95%, respectively as interest rates declined. Year-to-date, loans are slightly lagging the 3.68% and 3.61% returns for high yield and investment grade bonds respectively. The average price in the loan market dipped 75 basis points (bps) to 93.77. At their current average price, senior secured loans are providing a 9.98% yield inclusive of the forward LIBOR curve.

All figures are in USD.
