Past performance is not a reliable indicator of current and future results.

Fund overview

Investment objective

To achieve a return in excess of the Bloomberg Barclays Multiverse Index (Total Return Gross) Hedged to AUD ("Benchmark") by investing opportunistically in an unconstrained portfolio of debt securities and currencies, using derivatives where appropriate.

Month in review

- **Emerging market debt was the biggest contributor**, with positive returns from both local and hard currency bonds. Among our local bond positions, Indonesia and South Africa were standout performers, with the latter rebounding somewhat from previous volatility earlier in the summer. EM currencies also added.
- **Corporate high yield also added to performance**, with spreads in the US and Europe tightening by 12 basis points (bps) and 10 bps, respectively. The shorter duration of the asset class helped to overcome the backup in rates and high yield has provided attractive carry over recent months. Convertible bonds also did well.
- **Our government rates positioning**, where we remain short US Treasuries, was also a contributor to performance in August. With yields backing up after several months of grinding lower, this helped the fund. UK gilt yields also rose, where we also held a short position.
- **Investment grade credit was a marginal offset to the positive performance**, given its longer duration and thus susceptibility to rising rates. Despite this, corporate fundamentals remain supportive.
- **Over the month**, we trimmed our Italian bond exposure, added short positions to Poland and Chile government bonds. We rotated our EM FX exposure. Duration moved from 2.7 to 2.5 years.

Looking ahead

- **We continue to expect above-trend growth** over the coming months, as cases of the Delta variant tail off and economies continue to reopen. While new strains might present a risk, this is not our base case.
- **Higher inflation could persist for the near term**, as we see upward pressure in important components such as shelter. However, there are structural forces acting as a drag on inflation in the long term so a runaway inflationary narrative is not our base case.
- **We believe that rates can move modestly higher** from current levels, as government bond supply increases in the fourth quarter and the Federal Reserve begins to move toward tapering. We do not expect rate hikes until at least 2023.
- **We believe that the lower economic momentum in China should prove temporary**, which should be supportive for wider emerging markets.
- **We are constructive on corporate fundamentals** and favour high yield, where defaults are expected to remain low.
