

Robeco QI Global Multi-Factor Equities Fund EUR G

Robeco QI Global Multi-Factor Equities Fund invests in stocks in developed and emerging countries across the world. The selection of these stocks is based on a quantitative model. The fund's objective is to achieve a better return than the index. The fund follows a bottom-up driven investment strategy to gain efficient, well-diversified exposure to the proven factors value, momentum, low-volatility and quality. The fund uses enhanced factor definitions to avoid unrewarded risk and unwanted and unintended factor tilts.

Performance

Indexed value (until 31-05-2022) - Source: Robeco

Performance

Based on transaction prices, the fund's return was -0.99%.

The fund aims to achieve higher risk-adjusted returns than both the broader market and generic factor indices over a full business cycle by building efficient, well-diversified exposure to enhanced factors. The value, momentum, low-risk and quality factors have all shown to provide better risk-adjusted performance than the broader market on an individual basis – either by providing higher returns than the market with similar volatility, or by providing returns in line with the market but with reduced volatility. In addition, the fund is benefiting from the diversification effect of exposure to four factor premiums. The fund outperformed the market index in May, based on the NAV closing prices. The value factor outperformed the index. The momentum, quality and low-risk factors underperformed the index. Attributing the factor performances to sectors (split into allocation and stock selection effects), we find that the outperformance can be attributed to positive selection effects, while allocation effects contributed negatively.

Investment objective

The Fund follows a bottom-up driven investment strategy to gain exposure to the proven factors value, momentum, low-volatility and quality. Rather than using generic factor definitions, it uses enhanced definitions to avoid unrewarded risk and maximize its return potential. For example, value factors may lead to investments in distressed stocks that are cheap for a reason. Our proprietary distress-risk model helps to identify these risks and avoids such companies. Furthermore, the strategy aims to prevent that exposure to one factor gives negative exposure to another factor, avoiding unwanted and unintended factor tilts. It is a rules-based process that tries to avoid unnecessary transaction costs by only buying stocks if the expected gains outweigh the costs of the trade.

Value	Momentum	Low-Volatility	Quality
Price to fundamentals with focus on book values, earnings, yield and cash-flows	Residual and raw price momentum Residual and raw analyst revisions	Volatility Beta Distress risk	Profitability Accruals Investments
Avoid value traps by integrating other factors	Avoid over reaction by integrating other factors	Do not ignore price information by integrating other factors	Do not ignore price information by integrating other factors

Balanced combination of enhanced factors definitions designed to efficiently capture factor premiums

Top 10 largest positions

The top ten positions are primarily the result of the attractive characteristics combination of low price to fundamentals, positive momentum, low risk and high quality of these companies.

Sustainability

The fund systematically incorporates sustainability in the investment process via exclusions, ESG integration, ESG and environmental footprint targets, engagement and voting. The fund does not invest in stocks issued by companies that are in breach of international norms or where its activities have been deemed detrimental to society following Robeco's exclusion policy. Financially material ESG factors are integrated in the portfolio construction to ensure the ESG score of the portfolio is better than that of the index. In addition, the environmental footprints of the fund are made lower than that of the benchmark by restricting the GHG emissions, water use and waste generation. With these portfolio construction rules, stocks issued by companies with better ESG scores or environmental footprints are more likely to be included in the portfolio while stocks issued by companies with worse ESG scores or environmental footprints are more likely to be divested from the portfolio. In addition, where a stock issuer is flagged for breaching international standards in the ongoing monitoring, the issuer will become subject to engagement. Lastly, the fund makes use of shareholder rights and applies proxy voting in accordance with Robeco's proxy voting policy.

ESG Risk Score

The Portfolio Sustainability ESG Risk Rating chart displays the portfolio's ESG Risk Rating. This is calculated by multiplying each portfolio component's Sustainability ESG Risk Rating by its respective portfolio weight. If an index has been selected, those scores are provided alongside the portfolio scores, highlighting the portfolio's ESG risk level compared to the index.

The Sustainability ESG Risk Rating distribution chart shows the portfolio allocations broken into Sustainability's five ESG risk levels: negligible (0-10), low (10-20), medium (20-30), high (30-40) and severe (40+), providing an overview of portfolio exposure to the different ESG risk levels. If an index has been selected, the same information is shown for the index.

ESG Risk Score

Negligible (0-9.99)	1%	2%
Low (10-19.99)	48%	43%
Medium (20-29.99)	39%	41%
High (30-39.99)	11%	12%
Severe (40+)	0%	2%
Not Assessed	0%	0%

Footprint Ownership

Footprint ownership expresses the total resource utilization the portfolio finances. Each assessed company's footprint is calculated by normalizing resources utilized by the company's enterprise value including cash (EVIC). Multiplying these values by the dollar amount invested in each assessed company yields the aggregate footprint ownership figures. The selected index's footprint is provided alongside. Sovereign and cash positions have no impact. The portfolio's score is shown in blue and the index in grey.

Investment policy

Robeco QI Global Multi-Factor Equities Fund invests in stocks in developed and emerging countries across the world. The selection of these stocks is based on a quantitative model. The fund's objective is to achieve a better return than the index. The fund aims for a better sustainability profile compared to the Benchmark by promoting E&S (i.e. Environmental and Social) characteristics within the meaning of Article 8 of the European Sustainable Finance Disclosure Regulation, integrating sustainability risks in the investment process, and applying Robeco's Good Governance policy. The fund applies sustainability indicators, including but not limited to, normative, activity-based and region-based exclusions, proxy voting and engagement. The fund follows a bottom-up driven investment strategy to gain efficient, well-diversified exposure to the proven factors value, momentum, low-volatility and quality. The fund uses enhanced factor definitions to avoid unrewarded risk and unwanted and unintended factor tilts. The majority of the stocks selected will be components of the Benchmark, but stocks outside the Benchmark may be selected too. The fund can deviate substantially from the weightings of the Benchmark. The investment strategy aims to offer a better risk-adjusted return than the Benchmark over the long run whilst still controlling relative risk through the application of limits (on countries, sectors and issuers) to limit the extent of deviation from the Benchmark. This will consequently limit the deviation of the performance relative to the Benchmark. The Benchmark is a broad market weighted index that is not consistent with the ESG characteristics promoted by the fund.

Fund manager's CV

Guido is Head of Robeco's Factor Investing strategies and Co-head of the Quant Fixed Income team. He also holds a position as Professor of Behavioral Finance and Financial Markets at Erasmus University Rotterdam. Guido has published in top-ranked academic journals including the Journal of Financial Economics, the American Economic Review and Management Science. He started his career in the investment industry in 2004. Before joining Robeco in 2017, Guido was Head of Quantitative Research Fixed Income and Multi Asset at NN Investment Partners. He has worked together in research projects with the 2017 Nobel Prize laureate Richard Thaler. Guido holds a PhD and a Master's (cum laude) in Financial and Business Economics from Erasmus University Rotterdam. Daniel Haesen is Portfolio Manager Quantitative Equities and focuses on managing Factor Investing portfolios such as the Value-, Momentum-, Quality- and Multi-Factor portfolios. He specializes in factor research and portfolio management. Daniel joined Robeco in 2003 as a quantitative researcher, with a specific focus on quant selection research, working on both equity and corporate bond multi-factor selection models. He was also responsible for quantitative sustainability and quantitative allocation research. He has published in several academic journals, including the Journal of Banking and Finance. He holds a Master's degree in Econometrics and Quantitative Finance from Tilburg University in the Netherlands and is a CFA® charterholder. Wouter Tilgenkamp is Portfolio Manager Quantitative Equities and focuses on managing Factor Investing portfolios, such as the Value-, Momentum-, Quality- and Multi-Factor portfolios. Wouter joined Robeco in 2016 as a Data Scientist, with a specific focus on Equity Trading Research, automatization of portfolio processes, portfolio construction, and optimal execution of strategies. He started his financial career in 2014 as Derivative Trader at Optiver. He holds a Bachelor of Science in Applied Mathematics from Technical University of Delft and a master's degree in Quantitative Finance.

Fiscal product treatment

The fund is established in the Netherlands. The fund is managed as a 'naamloze vennootschap' (public limited company). The fund has the status of 'fiscal investment institution' in the sense of article 28 of the Dutch Corporate-Income Tax Act 1969, and, as such, is taxed at a corporate-income tax rate of 0%. The fund is obliged to pay out the realized current income in the form of dividend within 8 months after the end of the financial year. From 1 January 2007 the fund withholds Dutch dividend tax at a rate of 15% from these dividend payments. The fund can in principle use the Dutch treaty network to partially recover any withholding tax on its income.

Fiscal treatment of investor

For private investors residing in the Netherlands real interest and dividend income or capital gains received on their investments are not relevant for tax purposes. Participating units held by private investors who are taxpayers in the Netherlands belong in Box 3. If and insofar as an investor's net assets exceed the net wealth exemption limit, said investor is liable from 1 January to pay 1.2% annually on the balance of his or her net assets. Investors residing in the Netherlands may offset the Dutch dividend tax withheld (15% as at 1 January 2007) against their income-tax payment. Investors who are not subject to (exempt from) Dutch corporate-income tax (e.g. pension funds) are not taxed on the achieved result. Dutch tax-exempt bodies may seek a full refund on the 15% dividend tax withheld on dividends (25% prior to 1 January 2007). Interest income is exempt from tax withheld at source. Investors who are subject to Dutch corporate-income tax can be taxed for the result achieved on their investment in the fund. Dutch bodies that are subject to corporate-income tax are obligated to declare interest and dividend income in their tax return. In principle, Dutch bodies that are subject to corporate-income tax may offset the 15% dividend tax withheld on dividends (25% prior to 1 January 2007) against the corporate-income tax and seek a refund of the excess amount. Investors residing outside the Netherlands are subject to their respective national tax regime applying to foreign investment funds. Shareholders who do not pay tax in the Netherlands and who are resident in countries that have a tax treaty with the Netherlands to prevent double taxation, may seek a refund for part of the Dutch dividend tax from the Dutch tax authorities, depending on the treaty. As of 1 January 2007, a pension fund having its registered office in another EU member state is also entitled to a dividend-tax refund in the Netherlands. The above is based on the current fiscal legislation and regulation.
